

# ECORD MAGELLANPLUS WORKSHOP

## Drilling the Tonian to Cryogenian boundary in the Inner Hebrides, Scotland

**Dates:**

14 - 16th July 2024

**Venue:**

Kathleen Lonsdale Building  
University College London  
WC1E 6BT, UK

**Hosts:**

Graham Shields  
g.shields@ucl.ac.uk

Elias Rugen

elias.rugen.21@ucl.ac.uk

 Potential drill sites

**Workshop Aim:**

To gather together a diverse group of scientists at different career stages and establish the foundations of a new proposal for a drilling project around the Garvellach islands, Inner Hebrides, Scotland. Potential drill sites and operational logistics will be discussed alongside science goals within the framework of the ECORD Mission Specific Platform.

**Science Goals:**

- Recover the highest resolution record of the late Tonian to interrogate Earth's descent into the global 'Sturtian' glaciation.
- Progress towards defining the unratified basal Cryogenian Global Stratotype Section and Point (GSSP).
